Notch
MPC-P8 CHIP REPLACEMENT INSTRUCTIONS

Removal: Use an IC extraction tool or small pocket screwdriver to **carefully** remove the chip from its socket. If you use a small screwdriver, pry the chip up evenly so the pins are not bent during removal. Do not try to pull the chip from the socket with your fingers, you can bend or break the pins.

Replacement: Align the "notch" on the chip to the top of the board. Firmly press the chip into the socket, and then check for bent pins. If pins are bent, remove the chip, straighten the bent pints, and reinstall the chip.
